## FAQ

### **What kind of mobile apps that Devstella can create?**

We can develop apps for iOS, Android, and cross-platform using a variety of technologies and skills. We have expertise in building native apps using Flutter. HTML5/CSS/JavaScript; cross-platform apps with and hybrid apps with React native . We also have extensive experience in developing secure mobile applications based on industry best practices that scan for vulnerable dependencies. Whether you need a native app that looks exactly like an operating system (iOS), a responsive web app (HTML5) that works across multiple platforms, or a hybrid app that combines features of both, we are ready to help you out.

## **What is a web application? What types of web applications we are developing?**

A web application is a client-server computer program that runs on a remote/cloud server and can be accessed from any browser. It uses server-side scripts to manage storage and client-side scripts to display data to users.

A leading web app development company specializing in the following aspects of web application development services:

- Static Web Applications

- Dynamic Web Applications

- Shopping or eCommerce App

- Portal Web Applications

- Web Applications with Content Management Systems

## **Will you provide any support after the completion of the project successfully?**

Our goal is not only to create a successful product but also to make sure our clients continue to succeed in future endeavors. All of our mobile app development services come with ongoing support packages for each project. While it may be easy to build an app from scratch, keeping it updated and secure requires a commitment from your business—and Devstella offers mobile app maintenance services to help you through every step.

## **How can I get a process update on my mobile/Web development project?**

Getting a status update on your project is very important. As a client, you want to make sure that your projects are being managed and that they're still on track to be finished when expected. The best way to stay informed about your project is to set regular meetings with your mobile application development team members. During these meetings, have each person explain what their responsibilities are for that day/week/month and what you can expect from them. Meetings like these will ensure that both parties know how far along in the process everyone is and give everyone an idea of what's coming up next.

## How much does it cost to build a Web/Mobile application?

The cost of a web application depends on its features, complexity, development time, and level of customization.

**Features:** Number of third-party integrations, APIs, database complexity, content types, mobile compatibility, etc.

**UI/UX Design:** Fully customizable user interface UI/UX design apps are more expensive compare to ready-made design templates.

**The complexity of the project:** If your project requires the expertise and skills of experienced and qualified developers, the cost will be higher.
